

## Rubric "Contractors Needed"

Use the following rubric as a guide when completing this project.

	3	2	1
<b>Square Footage</b>	You should be an architect. All of the rooms' square footage has been calculated correctly.	A few of my calculations are correct, but others still need tweaking.	Attempted, but my calculations are incorrect.
<b>Appropriateness</b>	Excellent choices, I would put that in my own home. Three appropriate types of flooring have been chosen for the rooms.	I guess my wife/husband could live with that. Flooring will work for the rooms, but all criteria have not been met.	You want to put that flooring where? Instructions not followed.
<b>Flooring Costs</b>	Lowe's wants to hire you immediate for their flooring department. All calculations for flooring costs are correct.	Swimming, swimming, keep on swimming.... Some, but not all calculations were completed correctly.	You need to go back to 6th grade and have your teacher show you how to calculate unit costs.
<b>Presentation</b>	Ever consider a career in marketing? Information is displayed correctly with graphs, tables, and pictures.	Hmmm... Graphs, pictures, or tables present with lots of talking.	Yawn, ZZZZZ... Some information has been presented.
<b>Participation</b>	Every team member shared equal responsibility for doing all of the following: calculations, information gathering, and creating a presentation.	Responsibilities were divided up equally amongst the different members of the group with group members only doing their individual parts.	Minimal participation was present within this webquest.
